PROFILE

Engineering manager with 11+ years in high-growth SaaS and a deep technical foundation in distributed, service-oriented backend systems. I lead 9 engineers across two cross-functional squads at Ecologi (B Corp), owning delivery, budget and people end to end. AI evangelist for the team: drove adoption of AI-assisted development and upskilled every engineer, improving delivery speed 2-3x with a leaner team. Before management, 8+ years as an IC engineer, including a core platform service at King serving 50M+ daily and 200M+ monthly active users. Still hands-on where it matters: architecture, code reviews and building alongside the team.

EXPERIENCE

Ecologi B Corp · Remote Feb 2022 — Present

Senior Software Engineering Manager Feb 2025 — Present

- Directly manage 9 engineers across two cross-functional squads, owning end-to-end delivery from backend data models and services to user-facing features, partnering closely with Product and Design from problem definition to launch.
- AI evangelist for the engineering org: introduced AI-assisted development across coding, code review and testing, ran hands-on upskilling for every engineer, and turned it into a 2-3x improvement in delivery speed with a leaner team.
- Rebuilt delivery on one team: monthly PR volume grew from 65 to 266, shipped 74 feature releases, moved from 2 QAs to zero through stronger test automation and AI-assisted review.
- Drove CI/CD pipeline improvements; reduced build times by 50% and increased pipeline reliability by 90%, enabling squads to ship predictably and with confidence.
- Created a bespoke “Product Engineer” career path for a Staff Engineer who now leads full product direction and technical delivery for an entire workstream independently.
- Managed full people cycle: 3 promotions, a 6-month PIP through to resolution, and independent hiring and compensation decisions.

Software Engineering Manager Jun 2023 — Feb 2025

- Managed a team of 5 shipping features on the TypeScript/Node.js Ecologi Zero platform; ran the technical roadmap in close collaboration with Product.
- Conceived, pitched and launched Ecologi HackDays, a quarterly hackathon lifting builder culture, L&D and engagement.
- Led the company-wide migration from ClickUp to Notion; raised documentation standards and cross-team transparency.

Senior Software Engineer Feb 2022 — Jun 2023

- Designed and built core backend features on the Ecologi Zero platform; took PoCs to live products end-to-end in a TypeScript/Node.js/PostgreSQL stack.
- Championed test automation and code quality standards; mentored junior engineers.

Freelance Full-Stack Developer May 2017 — Feb 2022

- Delivered backend and full-stack solutions for international clients across Python, Java/ Spring, Go, Node.js, Vue/React, and Google Cloud Run; owned full system design, architecture and infrastructure.

King Games Barcelona, Spain Jun 2018 — Sep 2020

Full-Stack Developer — Shared Technology Jul 2019 — Sep 2020

- Maintained a core platform service delivering content and messages to 50M+ daily and 200M+ monthly active users across all King games: mission-critical, high-availability, service-oriented backend at global scale.

Backend Developer — Internal Applications Jun 2018 — Jul 2019

- Sole architect and developer of a company-wide events-management platform; owned tech stack, architecture, data model design, infrastructure and security.

iContainers Barcelona, Spain Nov 2015 — May 2017

Full-Stack Developer

- Built AWS back-office systems with Lambda, Go and MongoDB; modelled complex, multi-step shipping workflows end-to-end, from state transitions to 3rd-party API integrations.
- Built an automated end-to-end test framework from scratch in Node.js; significantly reduced regression risk.
- Orchestrated 3rd-party API integrations (AdWords, CRM, Freshdesk) and implemented full journey analytics tracking.

Early career Criteo · Sopra Steria · Barcelona Nov 2014 — Oct 2015

- Technical Solutions Engineer at Criteo (Barcelona): implemented retargeting tags for advertiser accounts; bridged technical and commercial teams.
- Software Developer at Sopra Steria: developed Java/Spring applications for public-sector clients in an Agile team.
